

WHAT IS CLAIMED IS:

1. A stroller, comprising:

a bottom frame;

5 a support frame having a lower portion pivotally mounted on a
mediate portion of the bottom frame;

 a rear frame having a lower portion pivotally mounted on a rear
portion of the bottom frame;

 two opposite folding devices each pivotally mounted on an upper
portion of the support frame and an upper portion of the rear frame;

10 a front frame having a lower portion mounted on an upper portion of
each of the folding devices;

 two pull blocks each movably mounted on the upper portion of the
front frame;

 two pull cords each mounted in the front frame and each having an
15 upper end secured on the respective pull block to move therewith;

 each of the folding devices including a main body, a socket, a slide
plate, and a locking plate, wherein:

 the main body has a periphery pivotally mounted on the upper
portion of the support frame and the upper portion of the rear frame;

20 the socket is secured in a lower section of the main body and has an
inside formed with a receiving chamber having a wall formed with slideway
having a bottom formed with a rectangular opening;

the slide plate is movably mounted in the receiving chamber of the socket and has a first section secured on a lower end of the respective pull cord to move therewith and a second section slidably mounted in the slideway of the receiving chamber of the socket, the second section of the slide plate is formed
5 with a locking slot aligning with the opening of the slideway of the socket; and

the locking plate is secured on the upper portion of the support frame and is formed with a protruding locking hook extended through the opening of the slideway of the socket and detachably locked in the locking slot of the second section of the slide plate, so that each of the folding devices is fixed on
10 the upper portion of the support frame by the slide plate combining with the locking plate.

2. The stroller in accordance with claim 1, wherein the main body has a saddle shape.

3. The stroller in accordance with claim 1, wherein the slide plate is
15 substantially L-shaped.

4. The stroller in accordance with claim 1, wherein the first section of the slide plate is formed with a fixing hole for fixing the lower end of the respective pull cord.

5. The stroller in accordance with claim 1, wherein the locking plate
20 has an arc-shaped cross-section.

6. The stroller in accordance with claim 1, wherein the main body has an upper section secured on the lower portion of the front frame.

7. The stroller in accordance with claim 1, wherein each of the folding devices further includes a fixing rod extended through the lower section of the main body and an upper end of the receiving chamber of the socket, so that the socket is secured in the lower section of the main body.

5 8. The stroller in accordance with claim 1, wherein each of the folding devices further includes an elastic member mounted in the receiving chamber of the socket and urged on the slide plate for pressing the slide plate toward the locking hook of the locking plate, so that the locking hook of the locking plate is locked in the locking slot of the second section of the slide
10 plate.

9. The stroller in accordance with claim 8, wherein each of the folding devices further includes a fixing rod mounted in an upper end of the receiving chamber of the socket, and the elastic member has a first end urged on the fixing rod and a second end urged on the first section of the slide plate.

15 10. The stroller in accordance with claim 1, further comprising a footrest frame pivotally mounted on a lower portion of each of the folding devices by two opposite joints.

11. The stroller in accordance with claim 10, wherein each of the two opposite joints of the footrest frame is mounted in a lower end of the receiving
20 chamber of the socket of the respective folding device.

12. The stroller in accordance with claim 10, wherein each of the folding devices is mounted between the footrest frame and the front frame.

13. The stroller in accordance with claim 1, further comprising a push bar pivotally mounted on an upper portion of the front frame by two opposite joints.

14. The stroller in accordance with claim 1, wherein the locking slot
5 of the slide plate has a rectangular shape.

15. The stroller in accordance with claim 1, wherein the opening of the slideway of the socket has a rectangular shape.
